LAUNCH X COIN ($LX)
White Paper
The Rocket Built to Stay in Orbit
Dynamic Liquidity • Daily Buyback & Burn Engine • Deflationary Asset
launchxcoin.io

1. Executive Summary

LaunchX Coin ($LX) is a Solana-based meme-utility hybrid that delivers strong deflationary mechanics alongside meaningful upside potential. Powered by **Meteora DLMM**, the protocol efficiently captures trading fees and systematically converts them into daily buybacks and permanent burns of $LX.

- **Presale Price**: **$0.00420**
- **Launch Price**: **$0.010** (**2.38x** built-in upside for presale participants)
- **Positioning**: A deflationary asset with real yield mechanics, positioned as "Digital Fuel" for the Space Economy narrative.

This project offers YOLO-style entry with real tokenomics: Concentrated liquidity for efficient trading, a programmatic Daily Buyback & Burn Engine, clear holder incentives, and a transparent path to a 3 billion token supply floor. Presale participants benefit from significant early advantage, while long-term holders gain from continuous supply reduction and future yield opportunities.

2. Token Metrics & Valuation

Attribute	Value
Token Name	LaunchX Coin
Symbol	$LX
Blockchain	Solana (Token-2022 Standard)
Total Supply	4,200,000,000 $LX
Presale Price	$0.00420
Launch Price	$0.010
Initial FDV at Launch	~$42 Million

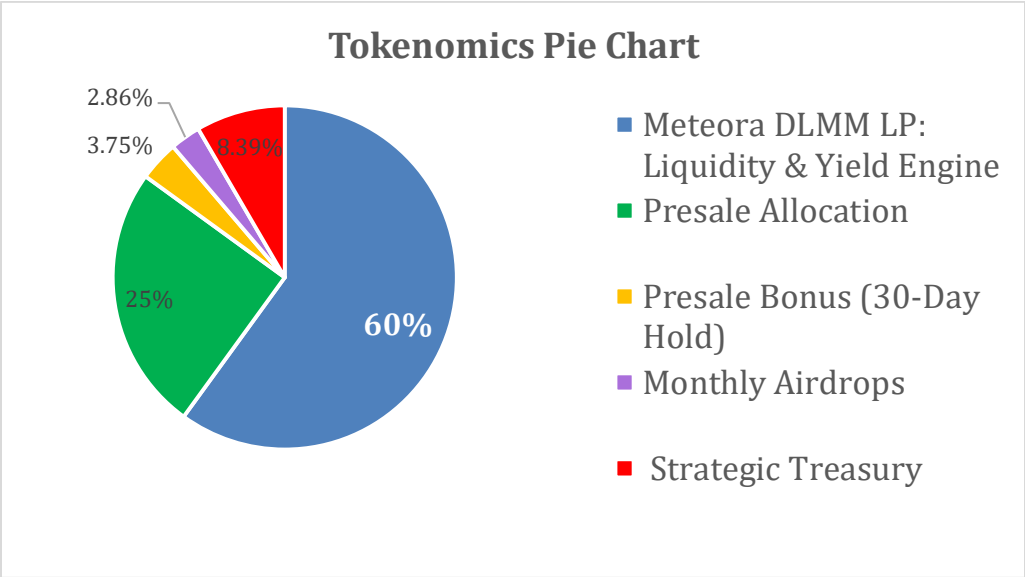
3. Strategic Allocation

All treasury operations are governed by a public **Squads Multi-Sig** for full transparency and accountability.

Category	% of Total Supply	Tokens	Purpose
Meteora DLMM LP	60%	2,520,000,000	Primary liquidity and yield generation for daily buybacks and burns

Category	% of Total Supply	Tokens	Purpose
Presale	25%	1,050,000,000	Early participants at $0.00420
Presale Bonus (30-Day Hold)	3.75%	157,500,000	Additional 15% allocation with 30-day holding requirement
Monthly Airdrops	2.86%	120,000,000	10M tokens per month for 12 months
Strategic Treasury	8.39%	352,500,000	Marketing, operations, and long-term sustainability

Presale SOL Allocation Approximately **25% of the SOL raised** during the presale is allocated for team expense recapture/profit and long-term project sustainability. Any overage automatically waterfalls into the Strategic Treasury.



4. The Deflationary Mechanism

4.1 Meteora DLMM Liquidity 60% of the total supply is deployed into a Meteora Dynamic Liquidity Market Maker (DLMM) pool. This bin-based system concentrates liquidity around the active trading price, providing efficient execution with reduced slippage and generating dynamic yield, particularly during periods of elevated volatility.

4.2 Daily Buyback & Burn Engine Yield harvested daily from the DLMM pool (and any supplemental treasury liquidity) is used by the public multi-sig treasury to execute open-market buybacks of $LX. The acquired tokens are immediately and permanently burned. This creates strong, ongoing deflationary pressure directly linked to actual trading volume, steadily driving circulating supply toward the 3 billion token hard floor.

5. Holder Incentives

- **30-Day Bonus Requirement**: Presale participants receive an additional 15% allocation. Any sale or transfer within the first 30 days after launch results in forfeiture and permanent burning of the bonus allocation.
- **Monthly Airdrops**: 10,000,000 $LX are distributed each month for 12 months. Eligibility is determined through randomized snapshots, with wallets required to maintain their baseline balance. These rewards are structured to incentivize long-term participation and conviction.

6. Security & Transparency

- Mint and Freeze authorities are revoked at launch.
- Liquidity is managed via Meteora DLMM under public multi-sig governance, enabling optimized yield generation while keeping all actions fully on-chain and auditable.
- A live transparency dashboard will provide real-time visibility into yield harvested, buybacks performed, burns executed, LP composition, and circulating supply.

7. Risk Disclosures

Investing in $LX involves significant risks, including high price volatility, impermanent loss associated with concentrated liquidity, dependence on trading volume for effective buybacks and burns, smart contract and protocol risks, and general cryptocurrency market risks. Participants should only invest funds they can afford to lose and are strongly encouraged to conduct their own due diligence.

8. Roadmap

- **Phase 1 (April 2026)**: Official launch on April 20 at 4:20 PM EST, activation of the Daily Buyback & Burn Engine, and deployment of the transparency dashboard.
- **Phase 2 (May 2026)**: Initiation of the monthly airdrop program and expanded marketing activities.
- **Phase 3 (June 2026)**: Alignment with anticipated SpaceX IPO-related market momentum and narrative development.
- **Phase 4 (2027 onward)**: Achievement of the 3B supply floor and transition to yield distribution for qualifying long-term holders.

9. Disclaimer

LaunchX Coin ($LX) is a meme-utility hybrid digital asset. The “Digital Fuel” and Space Economy narrative is purely cultural and does not imply any official partnership, endorsement, or affiliation with SpaceX or its entities.
